Professional Summary

Software Engineer with experience in full-stack web development, mobile applications, cloud technologies, and AI-powered automation. Passionate about building scalable, cost-efficient systems and developer tools, with a focus on system design: event-driven workflows, distributed storage, caching, and low-latency architectures. Building a personal agentic AI ecosystem using Hermes integrated with Discord, focused on intelligent automation, clean engineering practices, and shipping reliable products with measurable impact.

Education

Keshav Memorial Institute of Technology, Hyderabad

2022 – 2026

B.Tech in Computer Science and Engineering

Relevant Coursework: Computer Networks, Operating Systems, Database Management, Software Engineering

Experience

5th Bridge Data Technologies

Jan 2026 – Present

Hyderabad

Software Engineer

Jun 2026 – Present

- Built a role-based web platform for social media advertising agencies using React, Node.js, and Convex to manage influencer partnerships, from campaign creation to collaboration offer distribution.
- Built AI-powered content tools using React, Node.js, and SQLite, including a trending reel-idea generator combining real-time news aggregation with LLM-based content generation, and a cost-optimized text-to-video pipeline with prompt and model-inference optimization.
- Worked on application customization and extension development for ProCAD (Revalize), developing User and Domain Extensions to deliver additional functionality based on client requirements.
- Led a team of 3 (self + 2 interns) in building an event-driven, low-latency trading infrastructure using Node.js, ClickHouse, and PostgreSQL for real-time market alerts and fast order execution.

Software Engineer Intern

Jan 2026 – Jun 2026

- Designed and evaluated predictive models using Python, scikit-learn, and Pandas, combining machine learning and rule-based approaches with simulation and backtesting techniques.
- Built an NLP pipeline using Python, PyTorch, and Transformers to extract insights from unstructured text data.
- Implemented systems using Python, an LLM, and a search layer to verify signals for real-time identification of emerging trends from continuous data streams.

Technical Skills

- **Languages:** C#, Java, Python, TypeScript, JavaScript, Go, C++, Bash, Lua, SQL, HTML, CSS
- **Backend:** ASP.NET, Node.js, Express, Django, FastAPI, Flask, Mongoose
- **Frontend:** React, Next.js, React Native, Expo, ElectronJS, TailwindCSS, Nativewind, shadcn/ui, Vite
- **Databases:** Microsoft SQL Server, PostgreSQL, MongoDB, MySQL, SQLite, Redis, Convex, ClickHouse
- **Cloud, DevOps & CI/CD:** Docker, Docker Compose, Podman, GitHub Actions, Amazon Web Services, Amazon S3, Vercel, MinIO, Tailscale, Linux
- **AI/ML:** PyTorch, Transformers, Scikit-learn, XGBoost, LightGBM, NumPy, Pandas, Matplotlib, Jupyter, Gemini API
- **APIs & Integration:** REST, GraphQL, Discord API, Google Calendar API, Web Push
- **Web Scraping & Data:** Scrapy, lxml, requests, gspread, openpyxl
- **Testing:** Go testing, Jest, React Testing Library
- **Tools:** Git, GitHub, Mercurial, Neovim, Postman, Bun, SearXNG
- **Practices:** Agile, SDLC

Projects

Multi-Agent AI Bot Orchestration Platform

Python, FastAPI, Docker Compose, MongoDB, Discord API

github.com/vsreddyh/Agento

- Orchestrated six AI agents (one master coordinator plus five domain bots) on Discord through a single multiplexed gateway process, giving each agent an isolated profile home, workspace, and per-profile credential scope.
- Built a credit-aware LLM proxy that routes chat completions to OpenCode Zen and automatically falls back to DeepInfra on credit/payment errors, alongside private SearXNG search.
- Runs fully on Docker Compose (search, proxy, health-api, gateway, dashboard, retention job), with a dev mode that targets a test_ database on the remote cluster so development never touches production data.
- Implemented a Health Connect pipeline where an Android app syncs daily activity, sleep, and workout data to a FastAPI service that persists it in MongoDB and posts summaries to Discord.
- Automated data lifecycle management with scheduled retention jobs (90-day transaction wipes, 30-day health-data pruning) and secured the dashboard and APIs behind Tailscale, firewall rules, and password auth.

Schedio: Project Sharing Platform

React, Node, Express, Gemini API, MongoDB, Scrappy, Vercel, Docker

github.com/vsreddyh/schedio

- Built a full-stack collaboration platform connecting students, colleges, and recruiters for project discovery and collaboration, featuring role-based access control and profile management.
- Scraped data from over 10,000 colleges to create an institutional dataset.
- Implemented advanced search, filtering, and code exploration tools with tokenized search, plagiarism detection, and AI-powered code explanations (Gemini API).
- Enabled file uploads (code, images, videos), analytics, PDF exports, and contributor management, streamlining project sharing and evaluation.
- Supports Docker for development/production, with live access via Vercel.
- **Demo:** schedio-coral.vercel.app

Identiscan: Scalable Face Recognition Based Attendance System

React, TailwindCSS, Node, Express, Flask, MongoDB, ElectronJS

github.com/vsreddyh/identiscan

- Engineered a self hostable, scalable facial recognition attendance system using Python and the face_recognition library, achieving 99.38% accuracy in identifying individuals.
- Built a comprehensive web portal for managing attendance records, including batch wise and class wise organization, and a student dashboard interface to check attendance status.
- Created an application for Linux using ElectronJS, which featured a custom-built virtual keyboard for seamless use on touchscreen devices.

Anonymous Image Gallery: Cost Optimized Image Ingestion Pipeline

React, FastAPI, Redis, MongoDB, MinIO, Docker Compose, Amazon S3

github.com/vsreddyh/Minio-S3

- Designed an event-driven, cost-optimized media ingestion pipeline: uploads hit MinIO for fast, bursty ingest. A nightly mirror syncs to S3 and purges MinIO. Access is short-lived via signed S3 URLs.
- Reduced S3 costs by cutting noisy request overhead and only retaining curated files in S3 (about 10–25% fewer request charges).
- Developed a FastAPI backend that issues presigned URLs. Stores a list of images in MongoDB. Used Redis for caching signed URLs, cutting latency on repeat access.
- Containerized the stack with Docker Compose. Bun/Vite frontend, FastAPI backend, MongoDB, Redis, and MinIO for reproducible local and cloud deployment.

Warner-bash: Hardware Resource Monitor Script

BashScript, Linux

github.com/vsreddyh/warner-bash

- Authored a lightweight Bash script to monitor CPU, RAM, Disk, and Temperature usage on Linux systems.
- Implemented real time notifications that trigger when user defined thresholds are crossed, preventing potential hardware damage due to overheating or overuse.
- Covers battery state alongside CPU, RAM, disk, and temperature against user-defined thresholds.

Saanjh Sahayak: Clinical Decision Support Mobile App

React Native, Expo, Nativewind, Node, Express, Mongoose, Gemini API, MongoDB, Vercel

github.com/vsreddyh/mysaanj

- Building a cross-platform mobile application to assist doctors in clinical decision-making and patient data management.
- Integrating AI (Gemini API) to predict disease risks from patient inputs, reducing review time and improving diagnostic accuracy.
- Designed a secure Node.js + MongoDB backend to handle patient records and model predictions with scalable API endpoints.
- Modeled patients, old-age homes, and reports as Mongoose schemas with verified/unverified report arrays, severity scores, and AI-generated summaries.
- Built Express routes for caretaker/doctor session login, patient management, PDF report upload, and LLM-assisted report review, with an Expo frontend supporting PDF viewing and document picking.
- Ongoing personal project.

Rouge Automaton: Go Discord RAG Bot

Go, discordgo, MongoDB, Podman Compose

github.com/vsreddyh/rouge_automaton

- Built a Go Discord bot serving game intel through a direct gateway plus an OpenCode relay client, backed by a MongoDB store with keyword retrieval and cited context.
- Implemented a wiki ingestion pipeline with RecentChanges polling, wikitext parsers, and a live war-status feed, falling back to live wiki lookup with source links on local misses.
- Shipped multi-service Podman Compose deployment (bot, watcher, Mongo) from a distroless image, with a standalone MCP server over the shared tool executor and Go tests across packages.
- Seeds MongoDB from checked-in JSON intel organized by faction through a one-shot ingest command.

LeetCode Scoreboard: Competitive Practice Tracker

Next.js, TypeScript, MongoDB, Mongoose, Web Push

github.com/vsreddyh/leetcode-scoreboard

- Built a Next.js + MongoDB scoreboard ranking accepted LeetCode problems by $(100 - \text{acceptance rate})$ via the LeetCode GraphQL API, so harder problems score more.
- Implemented a five-minute external cron sync that upserts submissions into MongoDB while the dashboard reads pre-aggregated daily and total scores without touching LeetCode.
- Scores aggregate per user per day (IST), keeping daily and all-time totals consistent across syncs.
- Added a password-protected admin panel for tracked-user management and manual sync, plus Web Push notifications, PWA install support, and dark/light theming.

Daily Gita: Offline Multilingual Verse App

React Native, Expo, expo-sqlite, Nativewind, Scrapy

github.com/vsreddyh/Daily_Gita

- Building an Expo React Native app serving daily verses with file-based routing, drawer and tab navigation, offline persistence via expo-sqlite, and reading history.
- Wrote Scrapy spiders collecting Telugu and Hindi verses into a local dataset backing the app content.
- Structured screens with expo-router (home, history, settings, terms, privacy) plus splash screens and a language chooser, styled with Nativewind.
- Queries the on-device verse store through an expo-sqlite context hook so the app works fully offline.

Past Placements XLSX Generator

Python, pandas, lxml, gspread, GitHub Actions

github.com/vsreddyh/Past-Placements-XLSX-generator

- Scraped multi-year college placement tables with requests and lxml, normalizing company-wise selections, internships, and CTC figures into pandas DataFrames.
- Published formatted workbooks to Google Sheets via service-account auth with conditional formatting, automated through GitHub Actions.
- Deduplicated companies recurring across years and pivoted year-wise selections, internships, and CTC figures into per-company rows.
- Merged year-group headers, center-aligned the grid, and highlighted blank cells with a conditional-format rule via gspread-formatting.

Birthday Calendar: Excel to Google Calendar Sync

Python, pandas, Google Calendar API

github.com/vsreddyh/birthdayCalendar

- Built a Python tool importing birthdays from Excel via pandas and creating recurring yearly all-day events in Google Calendar.
- Implemented OAuth 2.0 login with local token caching, plus configurable email and popup reminders for each event.
- Caches OAuth credentials locally with automatic refresh so repeat runs need no browser login.

Wigikin: Themed Storefront with Leaderboard

Node.js, Express, JavaScript, HTML/CSS

github.com/vsreddyh/Wigikin

- Built an Express + vanilla JS storefront with product catalog, client-side cart, and themed content pages served as static files.
- Added a leaderboard page backed by a JSON REST endpoint, with file-based data served through Express routes.
- Implemented a client-side cart with a live count badge spanning the shop, leaderboard, and OnlyBalds pages.
- Added SEO meta tags and links to the community's Discord, Instagram, TikTok, and YouTube channels.

CLI Games: Bingo and Snakes and Ladders

Java, Python, Bash

github.com/vsreddyh/games

- Implemented console Bingo in Java across iterations, including a virtual board with sorted-map ranking logic and a shell launcher script.
- Built a playable Snakes and Ladders game in Python as an early programming exercise.
- Iterated Bingo across three versions, culminating in a virtual board backed by sorted-map ranking.

Certifications

- Google Project Management Certificate
